**Product price:**

\$40.30 tax included

**Product short description:**

This 5" diameter wooden canopy cover is used in our Filé system and made for use with our custom string light cables. It attaches and covers your junction box where the power connection comes in. Use this if you want to use our string lights indoors but hard-wired to the power, instead of using a two-prong plug.

This product is one of the base components in our Filé system. It can be matched up with other Filé components (wooden wall fairlead, wooden string light holder, and terminal block) and our string light cables to create your own originally designed wall or ceiling lights.

This piece is craftmade in Italy in our small workshop from Italian poplar. The natural wood can be painted or stained to whatever color you wish.

What's in the box? Included is the two-piece 5" diameter wooden canopy with 2 wood screws for attachment to your ceiling, 2 screws for attaching the two pieces of the canopy together, and a small metal fairlead, wooden dowel and 2 screws for blocking one hole of the canopy if needed.

Note that the canopy has two holes coming from each side. Due to this you can use it to attach two different string light cables going out in different directions if you desire. Or you can simply use the included dowel to "plug" one of the holes.

**Product description:**

Dimensions: Height 1.57" & Diameter 5"
