Product title:

EIVA-3, 3-way snap-in joint suitable for wet locations

Product attributes:

Finish: White, Black

Product image:

Product price:

\$13.10 tax included

Product short description:

EIVA-3 is the T-connection of the **EIVA outdoor string line system line**: the outdoor lighting system suitable for wet locations with which to create custom installations. Thanks to the special insulating gel contained inside, it can safely withstand rain and thunderstorms.

Fast and easy to assemble, EIVA-3 allows you to design multiple outdoor configurations using existing connections. The assembly is snap-fit and does not require tools, so it will be easy to create pendant lights with visible bulbs or shades, or create intersections between different garlands to create a real grid of lights.

With EIVA-3, you can choose the number, distance, and length of individual drops, bringing light where you prefer and where you need it most. Moreover, through the ring on the top, you can attach the joint in any outdoor space. And with the closure cap for the side holes included in the kit, in the same color as the joint, you can also use it as a terminal.

EIVA-3 is a product conceived, designed, and manufactured by Creative Cables.

Product description:

EIVA-3, 3-way outdoor connection:

material: thermoplastic, pre-filled with insulating gel

UL listed connector

Height: 3.93 inches

Width: 2.95 inches

Thickness: 1"

Rated voltage: 100-250 V ac

Suitable for wet locations.
